Security in the World

MOTIVATING JENNY

Read Me

Security in the World examines real-world security incidents from two different points of view. This structure promotes discussion among developers about the impact of security issues, and how such incidents may be avoided or handled by individuals and their teams. Key elements are:

- the security nature of the incident,
- the different perspectives on that incident, and
- the links made to the participants' own work experiences

The workshop uses the power of informal conversation between developers to *sensitise* them to security. The aim is to help professional developers, who make many decisions each day, to spot those that have security implications.

Get Started

1. OrganiserInstructions.pdf – how to setup and run the workshop
2. ParticipantInstructions.pdf – a set of guidelines to give to workshop participants
3. ModifyingtheWorkshop.pdf – tips for making changes, and further reading
4. MotivatingJennyOverview.pdf – information about other packs in the toolkit
